Project Title:

Design and Implementation of an Automatic Overcurrent Protection System using Arduino.

Circuit Diagram:

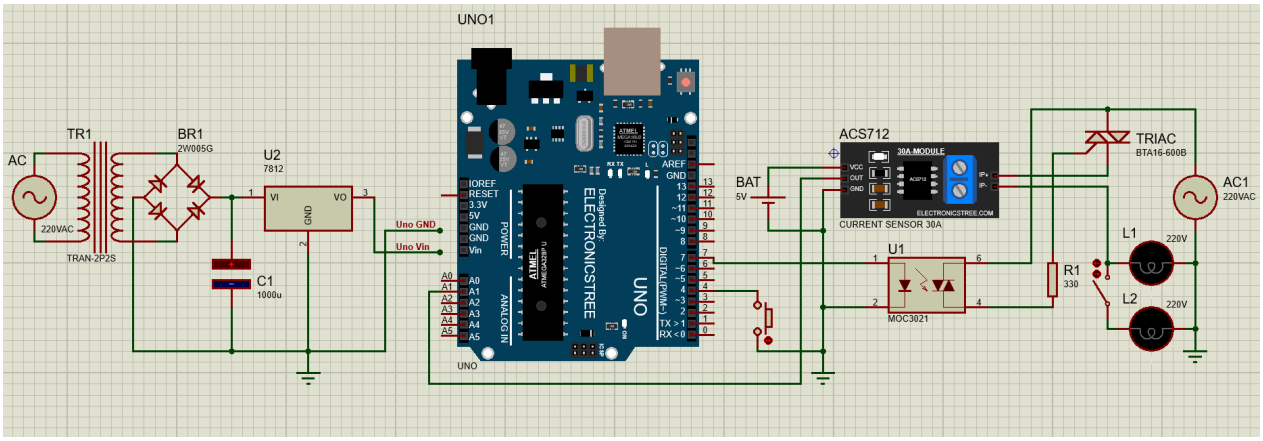

Fig.: Circuit Diagram of an Automatic Overcurrent Protection System

Applications:

1. Household Appliance Protection: Protects home appliances like heaters, irons, and motors from damage due to excessive current.
2. Industrial Equipment Safety: Automatically disconnects machines and motors during overload conditions to prevent overheating and fire hazards.
3. Laboratory and Power Electronics Protection: Safeguards experimental setups and sensitive equipment from short circuits and overcurrent faults.
